#### Country Size and Remoteness from Major Markets

#### DIFFERENT TYPES OF ECONOMY

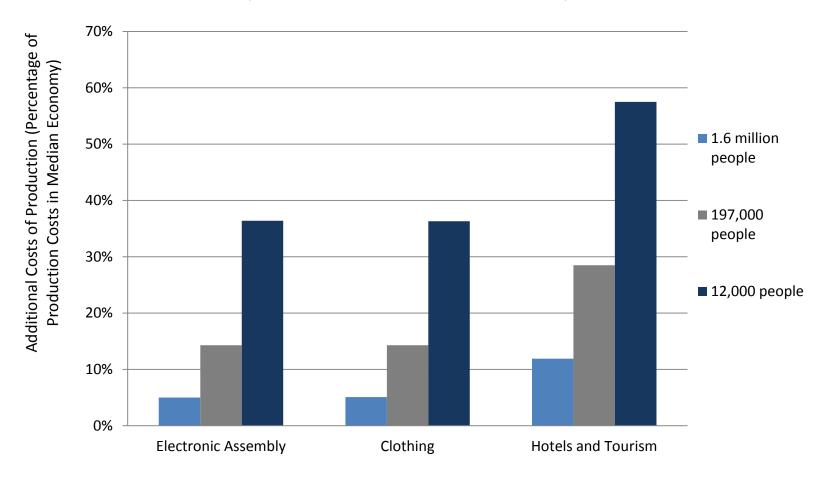

#### **Growth by Source**

### **Small Remote Countries**

#### **Higher Costs of Production**

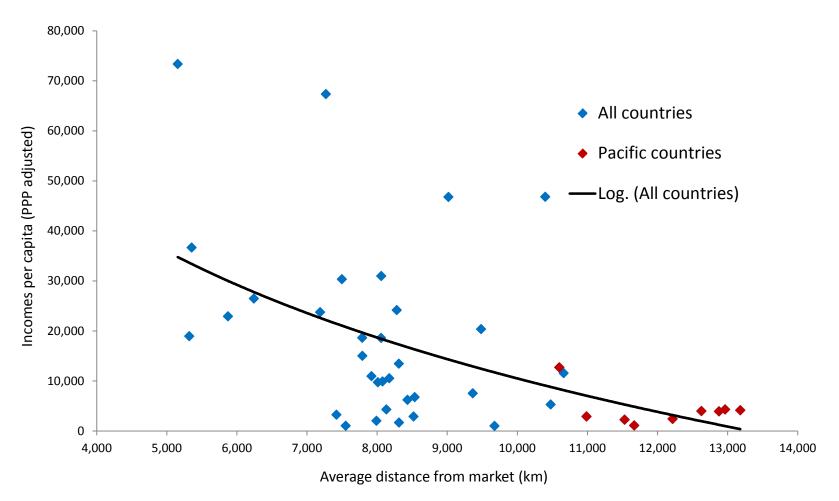

Additional costs of production by industry in small remote countries (Alan Winters & Pedro Martins, 2004)

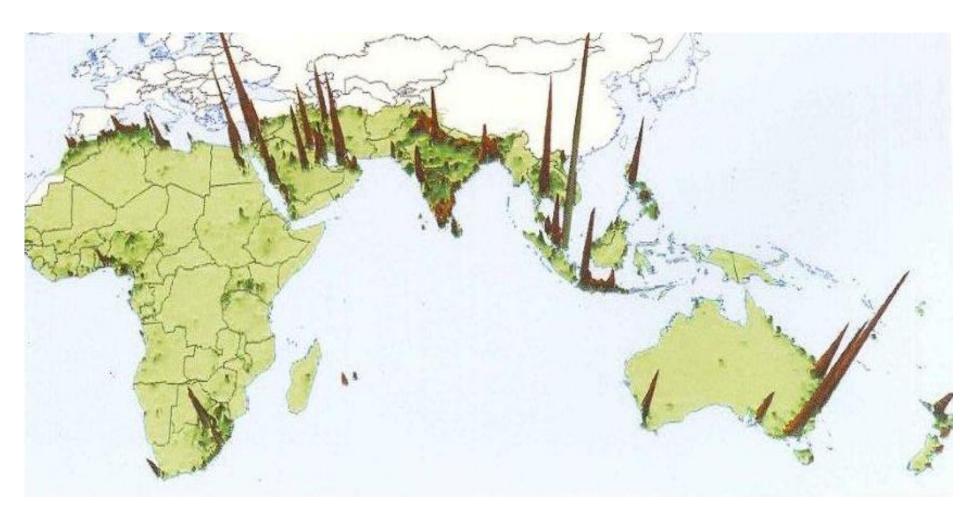

### Remoteness and Income

Indications of an Inverse Relationship

Remoteness and Income in Small Countries (Population < 1.5 Million)

#### **Economic Activity (GDP per square kilometre)**

#### Kiribati Budget – Redistribution Aid, Fishing revenues, and RERF

	2012	
Total revenue and grants	172.8	Almost 4 in 5 formal sector
Revenue	90.9	workers are public servants or
Tax revenue	27.1	public enterprise employees
Personal income tax	7.2	Primarily from
Company tax <	4.7	public enterprises
Import duties <	15.2	
Other taxes (hotel)	0.1	Import demand mainly derives from public sector
Nontax revenue	63.8	
Fishing license fees	58.4	
Other	5.4	Fishing licence fees = 31.7% of expenditure
External grants	81.9	31.7% of experior tale
Total expenditure	184.2	Aid receipts = 44.5% of expenditure
Current expenditure	102.6	44.370 OT EXPERIMENT
Wages and salaries	47.9	
Subsidies to public enterprises	6.6	
Other current expenditure	48.1	
Development expenditure	81.6	
Overall balance	-11.4	Sovereign wealth fund = 6.2 % of expenditure
Financing (RERF)	11.4	0.2 % of experioral

#### **Conventional Wisdom**

### Conventional problem:

Aid supports large public sectors  $\rightarrow$  squeezes out the private sector  $\rightarrow$  [weakens governance]  $\rightarrow$  reduces growth

#### Conventional solution:

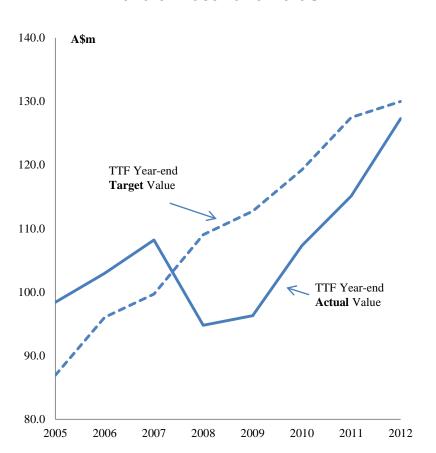

Reduce public sectors  $\rightarrow$  improve the business environment  $\rightarrow$  private sector will grow  $\rightarrow$  will generate taxes to pay for public services  $\rightarrow$  aid will dwindle  $\rightarrow$  economy will be self-reliant

### **Rethinking Conventional Wisdom**

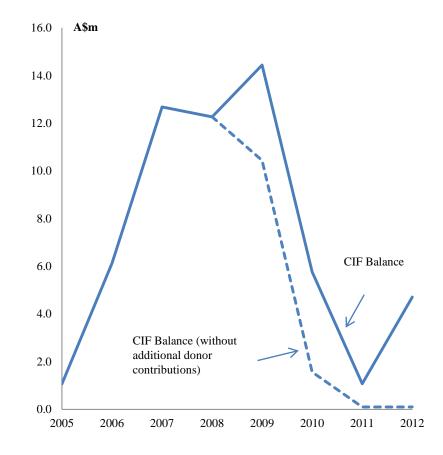

- □ Reduce public sector → Consider impacts on private sector. And even if 'large' how can it improve public service delivery?
- □ Private sector will grow → And it should, but may not generate sufficient revenues or jobs
- □ Improve business environment → Yes, but keep in mind what is really needed in a small economy and that regulatory capacity (or market institutions) will be challenged
- □ Aid will dwindle → Yes, some forms of aid and in some countries. But it could take new forms and modalities. Take a long term view

## Saving in good times... to spend in bad times

#### Tuvalu Trust Fund Value

#### Tuvalu Consolidated Investment Fund Value

#### Five Sources of Volatility

## Concentration of Exports

- Shocks to key natural resource or cash crop exports
- Economic downturns in tourism source countries

## High Import Dependence

- Fuel price shocks
- Food price shocks

### Significance of Remittances

- Economic downturns in remittance source countries
- Tightening of labour market access
- Demographic shifts in diasporas

### Importance of Aid

- Can mitigate overall economic volatility
- Can contribute to overall economic volatility (due to donor project cycles or aid policy changes by donors)

### Vulnerability to Natural Disasters

- Cyclones, floods, earthquakes, tsunamis
- Effects of climate change

#### Four Key Fiscal Policy Responses

①/⇩ Assets

- Trust funds / sovereign wealth funds
- Reserves
- Cash balances

û/∜ Debt

- Concessional loans from IFIs
- Loans from bilateral donors
- Domestic borrowing, bank overdrafts

Address Quality of Spending

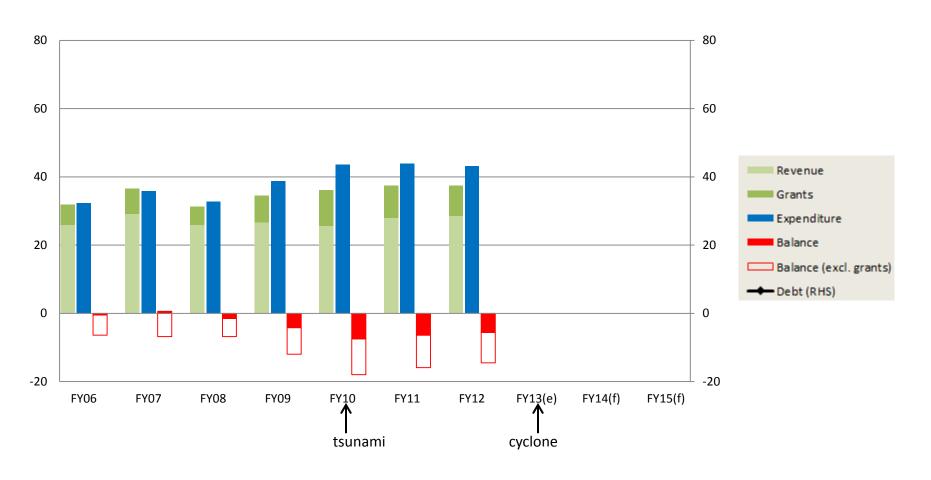

- Protects service delivery in the event of revenue shortfalls, without increasing deficits
- Augments value of other fiscal buffers

①/⇩ Grants

- Grants from bilateral donors
- Grants from IFIs (for countries as high risk of debt distress)
